(54) THROWAWAY DIAPER

(57)Abstract:

PURPOSE: To obtain a throwaway diaper with excellent fittability and absorption property and no lateral leakage by arranging an absorbing body between a liquid-permeable surface sheet and a liquid-nonpermeable back sheet, and arranging multiple pleats formed with the surface sheet into T-shaped or flat belts on the surface sheet.

CONSTITUTION: An absorbing body 3 is arranged between a liquid-permeable surface sheet 1 and a liquid-nonpermeable back sheet 2, and expansion elastic bodies 9, 9 are arranged between the surface sheet 1 formed with lateral both-side flap sections 6 and the back sheet 2 in the compressed state. The surface sheet 1 is loosened in the lateral direction on the surface sheet 1, T-shaped bag belts are formed with the surface sheet 1, and base portions and lower faces of upper centers of walls are stuck with an adhesive 13 to arrange pleats 4. Even if the wet-back of excretions exists, they are absorbed by the three-layer section of the surface sheet 1, the outsides of the pleats 4 are invariably kept in the dry state, and no uncomfortableness is given to a user. The excretions are dropped in a pocket portion formed between multiple pleats 4, the pleats 4 serve as valves, thus the back flow rarely occurs, and a remarkable effect is obtained for preventing the lateral leakage.
